SIVOCS INTERVIEW CANDIDATES | BATCH 2

Selection

The second batch of interview candidates focuses on unusual or unexpected cases along with the projects that scored high in one or multiple SI-related variables. There are 2 main clusters that encapsulate the selection process; Cluster 1 is generally concerned with the projects that have been relatively high rated regarding multiple outcome variables despite having low ratings in other key SI variables or vice versa and Cluster 3 includes the projects that have overall high rating in key SI variables.

The criteria used for each cluster is as follows.

Cluster 1 (19 projects):

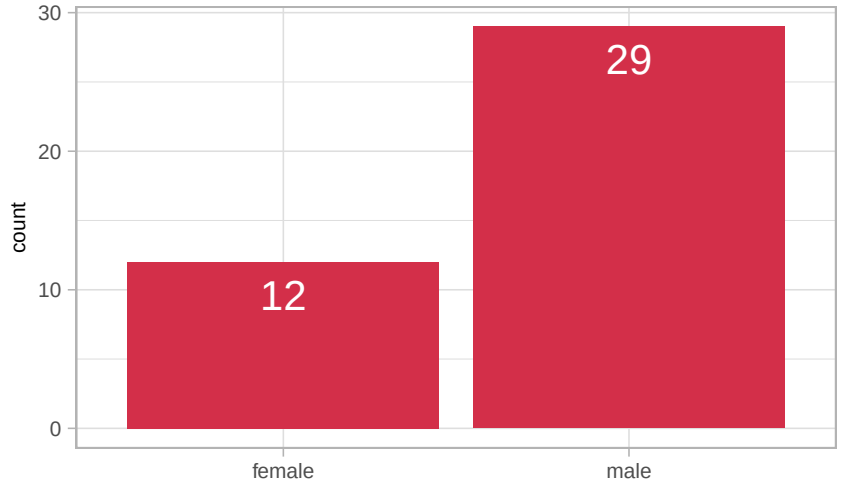
- Low motivation to benefit society - High SI contribution (self-assessment)
- Low transdisciplinary involvement - High public outcome
- Low motivation to improve human condition - high impact statement on emancipation/ capability/ understanding

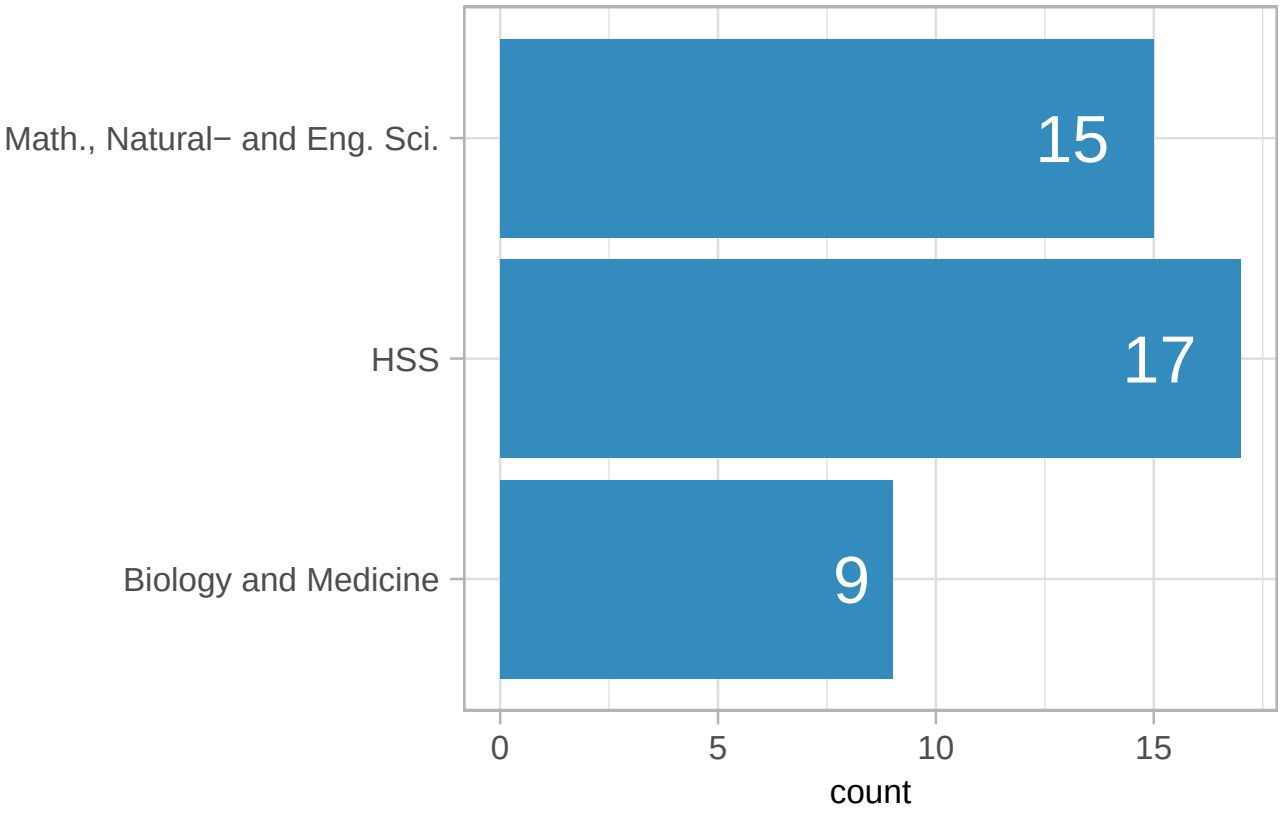
Cluster 3 (12 projects):

- High motivation to imp. human condition + changed behaviour (public, policy, civil society orgs)
- High SI familiarity (and/or high overall SI stats)

Final

After a manual elimination, from the ~80 selected projects, approximately 38 relatively less related projects are eliminated, **leaving 42 respondents in total** (12f | 29 ~ 30%).





Also, the distribution of the sci. domains in the final sample is as follows:
